PREPARED FOR SHEDRIVESNG / SEPTEMBER 2026

SheDrivesNG Platform proposal

A digital foundation for trusted mobility

We propose a connected platform that brings your riders, drivers and operations team together, supporting safer journeys, driver independence and the premium service that defines SheDrivesNG.

Proposed platform experience • Concept illustration

Building with your growth in mind

Our commitment extends beyond delivering an application. We want to help SheDrivesNG build rider trust, strengthen its driver community and grow a sustainable mobility business. We will work with your team through product reviews, pilot feedback, staff training and launch support.

We recommend a focused four-month launch, with a clear path to the complete platform. This gives you a practical starting point while preserving the wider vision for scheduled journeys, extended hire and premium airport services.

01 / SHEDRIVESNG

MVP features

A usable first release in four months: everyday booking, verified accounts and the essential tools to run the service.

Includes rider and driver apps for Android and iOS, a website, an admin portal and a government revenue portal. Launch scope covers one agreed city and one standard ride category.

01 Ride booking. Riders choose pickup and destination, request an immediate ride and receive driver acceptance and trip status updates. Drivers accept and complete bookings.

02 Verification. Riders and drivers submit identity details and a selfie for admin review. Approved accounts can use the service. Automated face matching and liveness are reserved for the full build.

03 Google Maps directions. Pickup and destination locations support booking and travel-time estimates. A directions button opens Google Maps for navigation; turn-by-turn guidance is not built into the MVP.

04 Estimated-time fares. The fare is calculated as estimated journey minutes ÷ 60 × ₦20,000. Riders see the price before booking. Traffic overrun charges are reserved for the full build.

05 Driver details on booking. Once assigned, the rider sees the driver's name, photograph, rating, vehicle details and registration number.

06 In-app chat. Riders and drivers exchange text messages within the active booking.

07 Direct calling. A call button opens the phone dialler so riders and drivers can contact each other directly.

08 Driver onboarding and inspection. Collect name, email, phone, required documents and preferred inspection centre. Admins coordinate the visit, record findings, rating and vehicle photos, approve the driver and upload the inspection report. Drivers receive status updates and the approved report.

09 Driver subscriptions. Drivers pay ₦20,000 weekly or ₦75,000 monthly through one payment gateway. Subscription status controls access to new bookings, with expiry reminders.

10 Government revenue portal. Authorised government users see the ₦30 allocation per qualifying successful booking, revenue totals and downloadable statements. Admins record settlements for review.

11 Admin portal. Admins manage riders, drivers, verification, inspections, bookings, subscriptions, fare settings and revenue records. All internal operations use this portal; no separate staff accounts or portals are included.

12 Two-way ratings. Riders rate drivers and drivers rate riders after completed trips. Admins can review ratings.

13 Public website. A responsive branded website presents the service, driver registration, contact information and app download links.

14 Notifications. In-app and push notifications cover booking updates, new messages, verification and inspection decisions, subscriptions and ratings prompts.

02 / SHEDRIVESNG

Full build features

The complete nine-month programme includes every MVP feature, plus the following service and operational upgrades.

01 Automated facial verification. Add identity matching and liveness through one verification provider, with exceptions reviewed by authorised staff. Facial checks confirm identity and liveness; gender is declared and reviewed under the agreed profile policy.

02 Driver passenger preferences. All genders may book. Drivers default to female passengers only and may opt to accept all genders. Matching respects the selected preference and the agreed account verification policy.

03 Scheduled bookings. Customers choose a future pickup time. The platform checks availability, sends reminders and dispatches the booking when due, with reassignment if needed.

04 Extended hire. Support four-hour, daily and weekly bookings with driver calendars, package rates, included allowances, extensions and overtime rules.

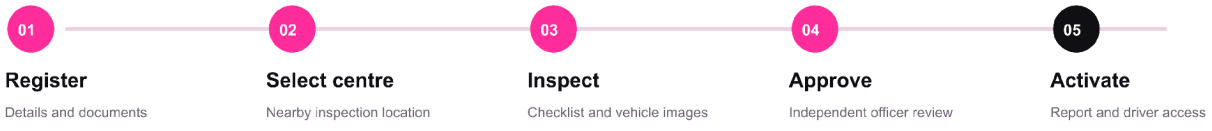

05 In-app navigation and voice calls. Add turn-by-turn navigation and live journey visibility within the app, plus internet-based rider–driver calling. Direct calling and text chat remain available.

06 Traffic and time overruns. Add a configurable charge when actual travel exceeds the original estimate, with any agreed grace period. Show the accumulating amount during the trip and the final fare at completion.

07 VIP airport pickups. Schedule premium airport arrivals with flight details and special welcome instructions, including paparazzi-style requests. Route bookings to suitable vehicles and highly rated drivers. Each VIP pickup costs ₦80,000 once, allocated ₦30,000 to SheDrivesNG and ₦50,000 to the driver.

08 Dedicated staff workflows. Add inspection officer, approving officer, customer support and auditor access, with separate permissions and workspaces. Admins retain overall control. Expand finance, dispatch and government reconciliation tools.

The full inspection workflow

An admin assigns an inspector at the driver's selected centre. The driver sees the inspector's details and centre address. Inspectors see assigned jobs and submit vehicle details, photographs, findings and an overall rating. A separate approving officer approves or requests corrections; the driver receives updates and the approved report.

09 Additional safety tools. Add trip PINs, journey sharing and incident reporting with support escalation.

Future roadmap. "Request a female driver" remains outside both quoted scopes as a future preference if driver eligibility expands. The current female-driver model already provides this service.

03 / SHEDRIVESNG

Designed for your business

The platform supports your subscription model, transparent journey pricing and distinct premium services.

STANDARD DRIVER PLAN

₦20,000

Weekly subscription

STANDARD DRIVER PLAN

₦75,000

Monthly subscription

Driver subscriptions

Standard rides carry no percentage commission for SheDrivesNG. Drivers retain their ride earnings, subject to agreed payment charges and applicable allocations. Active subscriptions enable new bookings; expiry reminders and access controls keep the model manageable without interrupting a live trip.

Journey pricing

In the MVP, the estimated journey time determines the fare at ₦20,000 per hour. For example, a 30-minute estimate produces a ₦10,000 fare. Route distance informs the travel-time estimate; it is not charged again as a separate per-kilometre fee. The confirmed booking fare does not automatically increase when traffic extends the trip.

The full build adds reduced per-minute overrun charges, any agreed grace period and a live fare total. Extended hires use separately agreed packages. Fare rules, cancellation terms and responsibility for additional charges are confirmed with your team before implementation.

VIP airport pickup

FULL BUILD / ONE-TIME SERVICE

₦80,000

Per VIP airport pickup. This is a service payment, separate from driver subscriptions.

REVENUE ALLOCATION

₦30,000 / ₦50,000

SheDrivesNG receives ₦30,000 and the driver receives ₦50,000 from each ₦80,000 pickup.

Bookings are assigned to eligible premium vehicles and highly rated drivers, with special welcome instructions. Your team coordinates any concierge or photography services. The treatment of payment processing fees and any applicable government allocation is agreed before launch.

Government allocation

The MVP includes a government revenue portal. A ₦30 allocation is recorded once for each qualifying completed, payment-confirmed booking. Government users can review totals, download statements and view settlements entered by admins. Applicable bookings, payment confirmation and remittance responsibilities are agreed during setup. Government access excludes identity records. Direct integration with a government system is excluded.

04 / SHEDRIVESNG

From vision to launch

A structured delivery plan keeps decisions visible and gives your team opportunities to review the product before release.

MONTH 01

Design and foundations

Agree scope and policies. Approve the website, portal and app designs, then establish the platform foundations.

MONTH 02

Core ride experience

Build booking, verification, driver onboarding, inspections, Google Maps directions and estimated-time fares.

MONTH 03

Operations and engagement

Complete subscriptions, chat, calling, two-way ratings, notifications, the website and both MVP portals.

MONTH 04

Pilot and launch

Test with riders and drivers, resolve launch issues, train admins and prepare store submissions and handover.

Months 5–8 · Full-build development. Deliver automated verification, passenger preferences, scheduled and extended bookings, traffic overruns, VIP services, in-app navigation and voice, dedicated staff workflows and safety tools.

Month 9 · Validation and release. Complete integrated testing, pilot the expanded services, resolve acceptance issues, train the wider team and hand over the complete platform.

Access by release

Release	Accounts and portals
MVP	Rider, driver, admin and government revenue access only. Admins handle all internal operations, including inspections.
Full build	All MVP access, plus inspection officer, approving officer, customer support and auditor workspaces with dedicated permissions.

Ready for the next stage

A modular backend, reusable app components and configurable tariffs support future expansion. Protected records, role-based permissions, audit logs, backups and monitoring are built into the delivery approach. We will review booking completion, repeat usage, active subscriptions and rider feedback with your team after launch.

The schedule begins at kickoff and assumes timely feedback, provider access and pilot participation. App-store and third-party approvals may affect the public release date.

05 / SHEDRIVESNG

Payment milestones

MVP: 40% at kickoff, 30% after the month-two demonstration, 20% at pilot readiness and 10% at acceptance and handover. For the additional complete-platform phase, payment is 40% at commencement, 40% at demonstration and 20% at final acceptance.

Included in your investment

Website, portal and mobile designs with two consolidated revision rounds; development; testing; deployment setup; training; documentation; source-code handover on full payment; and 30 days of defect support per release.

Infrastructure and third party costs

Infrastructure and third-party payments are excluded: hosting, databases, storage, bandwidth, backups, maps, SMS/OTP, verification, voice usage, payment fees, domains and app-store accounts. Stated integration work is included; provider charges are paid by SheDrivesNG.

Physical inspections, background checks, airport services, government remittances, permits, insurance and staff are excluded. Maintenance, new features and applicable taxes are separate. Flight-tracking and direct government payment-system integrations are not included.
